Changing speed

Catherine Connors - 2022-07-18 - General

It is easy to change the speed of the narration. The default speed for audio is 1x. First, hover over the bottom of the video with your mouse. Then, click on 1x to see the different options and select the speed you want. 0.5x is the slowest speed of narration and 2x is the fastest. You can speed up or slow down the narration, as required.
